Connecting the future

Avionics

SGA Technologies has been supplying high quality, high reliability hermetic components and packages since 1969. Customers globally are using SGA devices in applications where performance, quality and reliability are critical. Our components provide sealed protection against acceleration, shock & vibration, ideal for numerous sub-systems applications on land, sea and air.

Why use SGA Glass to Metal Seals?

- Hermetically sealed, vacuum tight
- Long-Life, reducing replacement time and cost
- Extreme temperature capability <250°C
- High Pressure resistance able to withstand high pressure applications
- Chemically robust to withstand corrosive environments
- Corrosion resistant
- Material Options allow for new design ease

Electrical & Functionality Characteristics

- Tested to 1x10 atm.cc/sec
- High insulation resistance
- High DWV
- Operational at high temperatures over 250 C
- Can be tested to MIL and JEDEC Standards

Mechanical Characteristics

- Multi-pin configurations available
- Pins suitable for automated assembly, manual soldering or mating connectors
- Orientation features can be added for PCB mounting or automation
- Small, space saving design
- Finishes available for wire bonding

Applications:

- Defroster Systems
- Fuel Control System
- Emergency Turbines
- Turbine Control Systems
- Radar-electronics
- Ignition Systems

Mechanical Drawings

Below are some examples of the seals SGA Manufactures for the avionics market. For full datasheet, please contact SGA.

What can I change?

- Pin: Chose from straight, solder cup or mating connections
- Pin diameter
- Pin length
- Pin configuration
- Ferrule metallisation

Avionics

Who are we?

SGA Technologies limited

Since 1969, SGA Technologies has been supplying high quality, high reliability hermetic components and packages. Customers globally are using SGA devices in applications where performance, quality and reliability are critical.

Equipment as diverse as satellite communications, military and commercial aircraft, oil drilling platforms, medical systems and scientific equipment are all using SGA products.

In-house Design, Assembly and Test

All aspects of design, manufacture and testing take place at SGA, thereby ensuring complete control over quality and reliability. Our engineers oversee all aspects of the process for you. During development and into production, you can be sure of our pedigree and experience.

New Product Development

At SGA we are able to offer a fast, complete design and manufacturing service. Because we control all elements, we can quickly customize every aspect of our design. On numerous occasions we have developed new processes to meet customer's exacting specifications.

We are always looking for new materials, new processes and new ways of bringing technological edge to our designs. We have worked with universities and on funded programs, working alongside leading research institutions to bring the very best performance and lifetime to our designs.

At SGA, whatever the challenge, we have the ability to meet it.
